The field of child psychiatry has come a long way since the early 20th century when many professionals still believed that childhood mental disorders resulted from poor education and training, and many adults, including those in the medical profession, viewed children as smaller versions of adults with the same means to process and express emotions and receptive to the same therapeutic methods as adults. Join us as our panelists discuss art and play therapies as they are used in child psychiatry today.

*This program is free and open to the public but does require advanced registration due to limited seating. For more information or to reserve your seat, please call (317) 635-7329 or email education@imhm.org
